

HP Elitedesk 800 G3 Mini - Boot läuft nicht durch...

Beitrag von „OSX-Einsteiger“ vom 8. September 2022, 14:37

Lau log ist das start verhalten viel besse 😊 habe etwas Geduld führe oder später wird das schon noch funktionieren 😊

Edit:

Wieder ein NvRamReset versucht ?

virtualsmc efend authenticated restart support is unavailable

<https://github.com/acidanthera...C/blob/master/Docs/FAQ.md>

Is authenticated restart supported?

Authenticated restart, normally invoked by `sudo fdsetup authrestart`, see `man fdsetup`, is supported when bootloader support or [VirtualSMC.efi](#) are present. However, it is insecure just as any software implementation is. If you care about privacy and security, you should disable it by passing `vsmchbkp=0` boot-arg.

The VirtualSMC implementation stores the encryption key in nvram and may encrypt it with a temporary key if higher RTC memory bank is available. Other than that, AptioMemoryFix will try to prevent reads of the encryption key after `EXIT_BOOT_SERVICES`, if installed.
