Gigabyte B550 AORUS PRO AC Bios Settings / DDR Speichersteckplatz Problem

Beitrag von „avus90“ vom 16. September 2022, 17:02

I have tested that [EFI](#) and on the loading bar crashed after 2 seconds and the log file is empty. nice.

to your message: yes, that's correct. I have a folder EFI and on that are 2 subfolder with BOOT and OC.

And I'm using a usb stick for that.

and I can't boot your new efi into open core, cause error (s. picture)

Thanks for your help.

So.. maybe we need a person, that have the right [bios settings](#)? xD
