Lenovo **4XC0F28732**

Intel X540-AT2

Dual 10 Gigabit

Läuft OOB unter Ventura und Monterey ohne extra Treiber

Gibt es für 15,- Euro:

Alles anzeigen

Hello, sorry for replying in english I prefer this way instead of google translate 😊
Today I tried the same network card from Lenovo, it's detected correctly with the AppleEthernetIXGBE and it's seen as X540-AT2 but every-time I'm enabling the link the system is crashing. Did you guys tested on AMD CPU's? I'm running a Ryzen 5950x with Monterey 12.6 and the latest OpenCore.

Thanks!
