

# AQ-107C unter macOS Monterey 12.3

Beitrag von „alexdordea“ vom 20. September 2022, 21:06

[Zitat von kaneske](#)

AppleVTD needs to be functional.

Enable VT-D equivalent in BIOS and your Problem is gone.

Enabled SVM and IOMMU set to auto, same results. While the link is established there is no traffic on the ethernet as well (until the system crashes in 2-3 min).
