So it's an AMD related Issue I think. With VT-D and that Quirk to False an AQ107 works fine on Intel machines.

Yes, for AQC107 (tested with Asus XG-C100C card) it's a known issue and it's not working with AMD after Monterey >12.3.

Thought that the X540-T2 will work as it's OOB. Seems that I need to go back to 1G TG-3468 as there is no working solution with AMD for 10G. Tried so far the X540-T2/AT2, AQC107 and AQC113CS. Before upgrading with 12.2 everything worked fine.
