Gigabyte B550 AORUS PRO AC Bios Settings / DDR Speichersteckplatz Problem

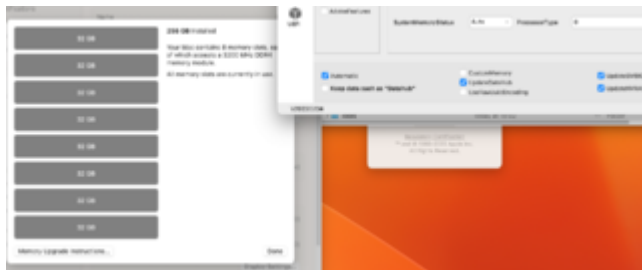

Beitrag von „Roy Jones“ vom 27. September 2022, 20:12

[Zitat von fabiosun](#)

If you use RestrictEvents next no need to map custom memory and also no need to use fake 1 GB DDR4 mapped module

(always with some doubt if I have understood well all) 😊

edit

that's exactly how it is.

You have understood everything correctly.
