

Monterey installation erfolgreich !!!! Wie geht es jetzt weiter ??

Beitrag von „max.b1963“ vom 28. September 2022, 22:33

Habe jetzt noch einmal bei Dortania nachgelesen, eigentlich sollte es bei dir funktionieren:

<https://dortania.github.io/OpenCore-iboot/empty/diffdisk.html>

Dualbooting on different disks

I will not get too long in this part as it's the EASIEST one:

- Install macOS on one of the disks
- Install \$(SECONDOS) on the other disk
- Install/copy OpenCore on the macOS disk EFI
- You're good to go

Things to keep in mind:

- Windows can be a bitch when it comes to multidisk setups (it freaks out when it sees a lot of EFI partitions on a lot of disks)
- If the above happens, disable/disconnect all the other disks and install windows as you would normally do
 - For laptops this can be a pain, you can install windows manually by following [this guide from TenForums](#)
