

# SSD/NVM Upgrade - Größe kann nicht angepaßt werden

Beitrag von „pleibling“ vom 29. September 2022, 23:14

Danke für deine schnelle Hilfe - hat jedoch leider nicht geklappt:

```
diskutil apfs resizeContainer /dev/disk2 998g
```

Started APFS operation

Aligning grow delta to 748.157.448.192 bytes and targeting a new physical store size of 997.999.996.928 bytes

Determined the maximum size for the targeted physical store of this APFS Container to be 249.843.154.944 bytes

Error: -69519: The target disk is too small for this operation, or a gap is required in your partition map which is missing or too small, which is often caused by an attempt to grow a partition beyond the beginning of another partition or beyond the end of partition map usable space

Kannst du sehen, woran das liegt?
