

# Intel Raptor Lake und Zen 4 [Leistung, Preise, Kompatibilität]

Beitrag von „Bob-Schmu“ vom 1. Oktober 2022, 10:19

[Zitat von theCurseOfHackintosh](#)

Mehr ecores - bringt das für macos überhaupt was

Das bringt bei jedem System was, mehr physikalische Kerne sind immer besser als SMT Kerne.

Man kann es auch über Brechstangenübertaktung machen wo 95 Grad Temperatur normal sein soll, Direct Die oder 1,5 mm vom Heatspreader abtragen, dann ist der CPU auch 15 - 20 Grad kühler. Wenn selbst eine 360er AIO gerade so reicht, dann sind Luftkühler komplett raus.

Ich persönlich tendiere eher zum 13700KF und 13900KF, da die KF Modelle jetzt auch ECC haben, fliegt bald mein AMD raus und dafür kommt der 13900KF mit W680 MB und DDR5 ECC RAMs.
