I usually prepare a working USB installer with with apple create installation method

download a full OS from APPLE then put It in application folder then from terminal:

Code

1. `sudo /Applications/Install\ macOS\ Monterey.app/Contents/Resources/createinstallmedia --volume /Volumes/MyVolumeName`

where this:

Code

1. `/Volumes/MyVolumeName`

is your USB pen

But it could be possible your Ethernet could also work with other kexts or a bootarg
