I usually prepare a working USB installer with with apple create installation method

download a full OS from APPLE then put It in application folder then from terminal:

Code

```
1. sudo /Applications/Install\ macOS\
   Monterey.app/Contents/Resources/createinstallmedia --volume
   /Volumes/MyVolumeName
```

where this:

Code

```
1. /Volumes/MyVolumeName
```

is your USB pen

But it could be possible your Ethernet could also work with other kexts or a bootarg

Alles anzeigen

do i need to update the opencore EFI afterwards ?

theoretically i am getting a sata usb adapter from amazon in maximum 1-2 hours, can i also prepare the full installation from a mac and than just plug in the sata into my machine ?
