

RX 6xxx(XT) Thread, Lieferbarkeit, Kompatibilität, Leistung

Beitrag von „Technotron“ vom 20. Oktober 2022, 16:37

[fabiosun](#) is RestrictedEvents.kext supposed to help with the "Memory modules misconfigured" message I get since updating to Ventura? Or is that something completely unrelated? Because my memory is still set up correctly (afaik) but I can't seem to shake the error message.

Edit: gosh nvm how did I end up in this thread haha... plz ignore was for the Ventura thread!
