

macOS 13 VENTURA beta

Beitrag von „fabiosun“ vom 21. Oktober 2022, 18:39

I hope it is not much OT

About Delta update in Ventura with RestrictEvents kext on

I have found the reason it fails and then it downloads the entire setup of Ventura (about 12 Gb)

The reason is I use MacPro 7.1 SMBios

With this I have to disable restrictEvents kext to have success in delta update of ventura

Using iMacpro1.1 I can leave enabled that kext

Download-Fritz is it related or could be a problem of AMD system?
