

macos 13 bootloop beim ersten Start nach der Installation !

Beitrag von „fabiosun“ vom 9. November 2022, 11:59

[waylin](#) if you like try this EFI

it is not useful enable debug (target 67) if you do not use an Opencore Debug version

I have updated to 086 and done minor adjustment

Edit:

while upgrading a system from a previous one or completely from scratch it's normal to have 3 to 4 reboots before you get to the part that allows you to configure user language and all the various options of OSX
