Hello,

I have an EFI folder compatible only to MacOS 12.6.1, that doesnt work with MacOS 13 or higher versions. I'll post the EFI, which works only with MacOS 12.6.1. It would be nice if you could take a look and tell me what I exactly need to update the EFI and maybe tell me what tools and software I need for the update. If it is easier for you, you can just update it by yourself and send me the updated version, but I would really appreciate it if you could tell me how its done so I can use it later myself.

thank you very much
