

macos 13 bootloop beim ersten Start nach der Installation !

Beitrag von „fabiosun“ vom 11. November 2022, 18:07

hi [waylin](#)

your config plist miss a couple of thing to work in Ventura OS

in kernel patches you have to add a patch:

algrey - _cpuid_set_generic_info - Disable check to allow leaf7 - 10.13/10.14/10.15/11.0/12.0,13.0

then all kernel patches must be modified in MaxKernel from 21.99.99 to 22.99.99

and maybe (unsure for this) you have to update some BT kext to newer one

This if you want to learn by yourself what you have to modify 😊

this instead is an updated EFI you could try (backup yours):

it is updated to opencore 086

new kernel patches

Edit I will post an EFI with better help
