

macos 13 bootloop beim ersten Start nach der Installation !

Beitrag von „waylin“ vom 11. November 2022, 18:29

Have you only modified the values in the config plist or have you changed the kext data? And can you please tell me where can I find or learn, for an upcoming update, what I should modify from an older version to a newer one when I already have a functioning EFI .

I will test the EFI you sent me tomorrow morning and write you then if it works or not. Thank you a thousand times once more, been working on that for a month and wasnt doing anything.
