[waylin](#) I use a plist editor to modify config.plist and the original repo of Opencore to update the boot loader

Same thing for the next

in your config:

this is Kernel patches section

I modified this:

this is new added patch and you can see in max kernel 22.99.99 (it means Ventura OS and greater)

[EFI.zip](#)

use and check this EFI (I have deleted the previous one)

to learn how to modify a config.plist you can use an app named OCAT, I think you can find useful info in this forum

to find instead what to change..this is another story

AMD CPU needs of some Kernel Patches and every major update could be a disaster for us...if something change in OSX kernel, our patches have to be update (probably) and sometime in major OS update also boot loader and kext need of a newer revision than previous used one
