

Asus B550 Bootloop

Beitrag von „fabiosun“ vom 15. November 2022, 17:19

[Paul1983](#)

which OS are you installing?

have you set properly your motherboard Bios?

I have checked your Kernel Patch section and now is good for your 5800X3D

Your GPU instead must be spoofed to work (but it is another problem)

I would check in bios if you have:

4G ON

UEFI ON

CSM OFF

to start
