

MSI B450 Tomahawk - Ryzen 5 2600 - Vega 56 - (Update gelingt nicht zu Ventura)

Beitrag von „JuliBe“ vom 27. November 2022, 18:49

I still don't know how I can boot from a different EFI without deleting the old.

But the EFI doesn't work on the installer it stops on "X86PlatformPlugin: :getCPUStates - acpiPSArrayObj is not an valid OSArray".
