

Radeon RX 5700 XT oft schwarzer Bildschirm

Beitrag von „Thunder43“ vom 19. Dezember 2022, 08:53

[fabiosun](#) I tested the plist briefly on my created Ventura stick. Unfortunately, still comes only the apple logo without bars and the setup does not start. I will follow up the hint with the LAN interface. Since yesterday I have a USB WLAN adapter (Wavelink WL-WN692A3) with OpenCore WLAN drivers in use. Therefore I don't need the LAN interface anymore and can remove the kext.
