# Installation of macOS Ventura on a Huananzhi x79+E5-2650V2 motherboard

**Beitrag von „Steel_Leandro" vom 24. Dezember 2022, 07:22**

Good Morning!
Okay?
Well, I have this equipment: E5-2650 V2, Huananzhi x79 deluxe motherboard, 16GB of ram.

I use Bigsur and I'm going to install Monterey, but I would like to know by chance has anyone already managed to install macOS Ventura on a PC with the same characteristics as mine, as I wanted to get a working EFi for Ventura.

Thank you in advance for anyone reading and trying to help me.
It will be of great help.

I would like a tutorial on how to make it work.

I will leave my EFI running in BigSur and Monterey

Code

1. My setup:
2. Motherboard: Huananzhi x79 Deluxe
3. Processor: E5-2650 V2
4. 
5. Video Card: RX5500XT 8GB
6. 
7. Memory: 16GB of ram
8. 
9. SSD: RVME 512GB
