

Update von 13.0.1 auf 13.1 nur mit "komplett"-Download

Beitrag von „fabiosun“ vom 28. Dezember 2022, 11:45

for AMD CPU users the delta update always works if you use iMacPro 1.1 SMBIOS without disabling any kext

If you are using MacPro7,1 you need to disable the RestrictEvents kext and the bluetooth fix kext mentioned earlier in the thread, otherwise the update fails and an update of about 12 Gb is proposed
