

Habe Windows jetzt echt satt und wage es. Was ist mit den BIOS-Einstellungen für macOS Installation?

Beitrag von „Hecatomb“ vom 29. Dezember 2022, 11:30

Intel [BIOS settings](#)

- Note: Most of these options may not be present in your firmware, we recommend matching up as closely as possible but don't be too concerned if many of these options are not available in your BIOS

[#Disable](#)

- Fast Boot
- Secure Boot
- Serial/COM Port
- Parallel Port
- **VT-d (can be enabled if you set [DisableIoMapper](#) to YES)**
- Compatibility Support Module (CSM) (**Must be off in most cases, GPU errors/stalls like `gIO` are common when this option is enabled**)
- Thunderbolt(For initial install, as Thunderbolt can cause issues if not setup correctly)
- Intel SGX
- Intel Platform Trust
- CFG Lock (MSR 0xE2 write protection)(**This must be off, if you can't find the option then enable `AppleXcpmCfgLock` under Kernel -> Quirks. Your hack will not boot with CFG-Lock enabled**)

[#Enable](#)

- **VT-x**
- Above 4G Decoding
- Hyper-Threading
- Execute Disable Bit
- EHCI/XHCI Hand-off
- OS type: Windows 8.1/10 UEFI Mode (some motherboards may require "Other OS" instead)
- [DVMT](#) Pre-Allocated(iGPU Memory): 64MB or higher

- SATA Mode: AHCI

#Once done here, w
