

Hackintosh Build - Asus Z690 Maximus Hero - i9 13900k - macOS Ventura - OpenCore

Beitrag von „XH4K3RS“ vom 6. Januar 2023, 10:25

hi

can you help me i have download your efi in github and i'm familiar with the world of hackintosh but so, i have a problem .

i do all things with smbios serial ...ect and correct usb key with mac os ventura last version .

but launch fail always i try many things , how to pass this kernel bug ?

i have already install monterey inside with orilla efi but i'm searching a full compatible thunderbolt and i see just your efi saying working into internet , so i want to try yours.

sorry for bad english i'm french

Thanks
