[Zitat von BUSTER](#)

Danke dir für die Infos, die CPU ist ein Trinity,

[Zitat von BUSTER](#)

done.., debug ist nicht an denke ich

EFI posted here is wrong if your CPU is the one I can see in CPUZ screenshot

you have a 4 cores cpu (patches I see are set for a 8 cores cpu

also you should try to check well all the patches you are using for kernel/patches

they seems a bit more than the useful ones (and newer ones)

EDIT:

you have doubled all the patches in your config

first 3 are for a 8 Cores CPU then you use also the ones good for a 4 cores CPU
