

AMD oder Intel problemfreier?

Beitrag von „fabiosun“ vom 3. Februar 2023, 09:19

The last good intel processor I had was a xeon 2696v4 (in fact I had two mounted on an Asus board with 256 Gb)

Then I upgraded my system to the Extreme edition 7980Xe and was happy

Then Intel started the policy of refresh of their CPUs (9980xe 10980 xe) or absurd costs for new Xeons

I switched to AMD threadripper 3970x which gave me much satisfaction for three years

Now I have jumped back for multicore with an AM5 platform

but I am very happy with how it all works with the software I use (Adobe suite and Davinci Resolve)

Yes there is to suffer a bit more as AMD is not directly supported by the OpenCore developers....

But that's the beauty of HACK...or is it? 😊
