

HP Compaq Elite 8100 mit macOS?

Beitrag von „simon0302010“ vom 9. Februar 2023, 11:30

Es ist noch mehr als genug Platz für eine dGPU. Nach meinen Recherchen aber ist die iGPU eine Westmere iGPU, die supported wird.

Westmere i3/5/7-xxx

Highest Supported OS: High Sierra (10.13.6)

Initial Supported OS: Snow Leopard (10.6)

Unfortunately, Mojave dropped support for these iGPUs, but luckily we can actually get these iGPUs working by using old kexts (though no Metal support so things are a bit iffy). The [OpenCore Legacy Patcher](#) is the best way to add support for these GPUs. However, OCLP is geared towards real Macs and while it will work on Hackintoshes, there is no official support.

- HD Graphics (yup, that's all they called them)

Needed kexts:

- [Libkext](#)
- [WhateverGreen.kext](#)
