

OpenCore 0.8.8 + Ventura 13.2 installiert, aber EFI-Partition ist leer

I have 4 separate disks for 4 different OSes (Windows 11, Big Sur, Monterey, Ventura).

On which disk should Opencore automatically install the one EFI I use to start them all?

Better not to automate too much and leave it to the user to figure out (even make mistakes) what to do!

perfetto. breve e dolce.
