

XPS 13 9343 HD5500 (Low GPU Mem)

Beitrag von „Basti Wolf“ vom 24. Februar 2023, 07:38

Sorry for the late reply. At the moment I have a lot to do 🤔 in the past there was some users with the xps 13 9343 with the i7 and 4K Display like yours. We ve tried so many times to get the igpu run but there are some Problems we dont understand at This Time. So there is actually no solution to get it run with full graphics Support. Here are the other threads maybe They will help u. 🤔
