[Zitat von mjxn](#)

I'm using a core graphics,

Can I use NVIDIA's graphics

Nvidia web drivers works perfectly till High Sierra and Pascal GPUs

it is not advisable to use a so old system with this kind of hardware

Add:

thanks to [Lorys89](#) for his advice I have modified my USB mapping (attached in this post)

with this is possible to wake the system with USB keyboard/mouse click (2 click to wake it, but it is possible to wake system with only one click)
