Request from HWC: Asus ProArt Z690-Creator Wifi

Beitrag von „al6042" vom 21. März 2023, 19:27

Hi Zito,

I had to move your questions from [Asus ProArt Z690-Creator WiFi](#) into another post, since the threads in our Hardware section should not be used for support requests.

I will not be able to create a set of pictures regarding the [bios settings](#) until tuesday evening.

Since my EFI-Folder, which I posted in the Hardware section, contains the boot argument -v (for verbose) you should not see the apple logo at all while booting with that EFI.

Please use the downloaded EFI-Folder from an USB stick and make sure you boot your system from that stick.

EDIT:
Just created the screenshots of my [BIOS settings](#).

See attached zip file for details
