[Zitat von kavenzmann](#)

I deactivated the SmallTreeIntel82576 kext, but it does not seem to make any difference.

Computer is restarting every 15-30 min or so. Even when there is nothing going on.

AppleMCEReporterDisabler.kext

try to add in your huge kext list 😊

but it should be useful also in Monterey to avoid a reporter error with some smbios (I do not know if it is useful for iMacPro1.1 also)
