

AMD Radeon 6650 XT, 6950 XT und 6900 XTXH ohne GPU-ID Spoofing

Beitrag von „sixfx“ vom 24. März 2023, 12:22

Danke [ozw00d](#)

Hello. I own an XFX 6650 XT which works with the usual method (device id as FF730000 + GPU-SPOOF.aml + with boot arguments agdpmo=pikera) and works fine. But I read that some people use this method and was trying to implement it because seems a better way.

I am using last version of Opencore 0.90

In my case, it caused a reboot and I didn't see the login screen.

The steps I followed are:

1- Keep whatevergreen.kext and boot arguments (If I understand well, that part doesn't need to be removed)

2-From the device properties, remove the long PCI (the PciRoot(0x0)/Pci(0x1,0x0)/Pci(0x0,0x0)/Pci(0x0,0x0)/Pci(0x0,0x0))

3-Put the kext AMDRadeonNavi2xExt.kext in the kext folder and load it to the config.plist

Any idea why isn't working? I can upload the config.plist or something else if that helps

Thanks
