

AMD Radeon 6650 XT, 6950 XT und 6900 XTXH ohne GPU-ID Spoofing

Beitrag von „sixsix“ vom 27. März 2023, 00:27

Hi,

Thanks for the reply.

Here is the config.plist file [config.plist](#)

According to the opencore log the kext is being loaded:

```
19:355 00:023 OC: Prelinked injection AMDRadeonNavi2xExt.kext (AMDRadeonNavi2xExt.kext)
- Success
```

```
19:375 00:019 OC: Prelinked injection AMDRadeonNavi2xExt.kext v1.0.1
```

So currently, I am using two aml files and is working fine(ACPI folder):

SSDT-BRG0.aml ---> Attached DSL [SSDT-BRG0.dsl](#)

SSDT-6650XT-73EF-GPU-SPOOF.aml ---> Attached DSL [SSDT-6650XT-73EF-GPU-SPOOF.dsl](#)

I have a ImacRegistry.ioreg file (5mb compressed) with the active spoofing here --> [ImacRegistry.zip](#)
