

AMD Radeon 6650 XT, 6950 XT und 6900 XTXH ohne GPU-ID Spoofing

Beitrag von „utopia“ vom 6. April 2023, 19:46

I never tried it myself but some others got way higher scores than me (x3 times more)

I'm also on 13.3 and VDADecoder is not working as well

I've tried to spoof the card before but i always fail I'm not sure why, the device-id seems to never change, and location paths on Windows report 2 ACPI paths, i only took the first one as `_SB_PCI0_GPP8`, and it shorter than usual or is this normal?

i tested multiples booting the efi from the USB and didn't work, (didn't want to risk your working kext on my disk efi)
