

MSI X99A GAMING PRO CARBON - Ventura

Beitrag von „Tastenheld“ vom 21. April 2023, 11:49

Actually the 570 should run but I read some posts where people have not been able to get the 570 to run with Ventura.

I can't say why that was exactly because there was too much information missing... They fixed it via OCLP.

Since I don't own a 570 I can't verify this...

I send you an EFI folder in private.

Do me a favor and don't share it!
