Unfortunately, DRM Decoder does not work with this solution.

Could it be because the `AMDRadeonX6000_AMD RadeonHWServicesNavi` is not injected properly? Also `AMDRadeonX6000_AMD Navi21GraphicsAccelerator` is missing from IO Registry at all. I am attaching an IO Registry backup for comparison. The `IOProbeScore` is set to 6502, which is higher than the original by only 1, whereas the `IOProbeScore` of the `AMDRadeonX6000_AmdGpuWrangler`, which injects correctly is 2 units higher than the original?
