Nvidia WebDriver und Cuda deinstallieren

Beitrag von „mutterhunt“ vom 2. Mai 2023, 09:54

Wie, wenn Dein System crashes in Startup? Tried linux apfs-rw-Driver and do\$e 11. with Paragon, behausend of backups its not possible to write the APFS. So reinstalling and on Setup back to Time Machine . Lost an hour. It shows me how sensitive those Apple drivers are!

Another Solution: boot to recovery and kill the NVDA-Kexts manually!

Liz
