

macOS 13 VENTURA beta

Beitrag von „hackmac004“ vom 1. Juni 2023, 21:49

[megabyte0469](#) Hast du es mal mit dem kürzlich hinzugefügtem Quirk probiert?

8. **DisableIOApertureMapping**

Type: plist boolean

Default: false

Requirement: 13.3 (not required for older)

Description: Disables mapping PCI bridge device memory in IOMMU (VF-d).

This option resolves compatibility issues with Wi-Fi, Ethernet and Thunderbolt devices when AppleVTd is enabled on systems where the native DMAR table contains one or more Reserved Memory Regions and more than 16 GB memory is installed. On some systems, this quirk is only needed when iGPU is enabled.

Note 1: This quirk requires a native DMAR table that does not contain Reserved Memory Regions or a substitute SSDT-DMAR, and in which Reserved Memory Regions have been removed.

Note 2: This option is not needed on AMD systems.
