

# Hilfe bei: Hackintosh auf AMD System installieren

Beitrag von „fabiosun“ vom 14. Juni 2023, 18:45

[pegxa](#) you have different way to try to solve sleep/wake problems

first one (drastic way) to disable it

Second one (advised) is to map well your USB ports (Bluetooth if you have)

Usually it is possible to have a perfect working sleep/wake if all is well configured
