[Zitat von Genuinejakob](#)

Hi [hObelware](#),

if you don't have the time to investigate this any further, could you please upload the Xcode project or the relevant parts of the code to GitHub? Maybe the Whatevergreen devs can look into it and fix DRM.

Still many thanks for the kext that is available so far!

The Xcode project this is based on is on GitHub. It is actually Apple Original open source code. There is a link in the first post.
