your EFI need an update in opencore and kexts (kexts are pretty old)

also patches for AMD CPU must be updated if you are trying to update OSX to latest OS available

as side note, i have had many problems to download your EFI from that provider 😊

Okay, thanks for the info. I'll update it and try it out thank you

Edit: It worked! Thanks! I have the problem now that my RX 6600 is not showing up in the system. Do you know this Problem aswell ?
