

# OC DELL Latitude E6420

Beitrag von „gorans“ vom 4. August 2023, 09:44

Hi,

I'm trying to use my e6420 (i5, HD3000, 8GB, SSD) as High Sierra hackintosh.

I tried with latest opencore, but USB ports don't work and i can't boot with SMBIOS set to macbookpro8,1.

I tried with latest Clover and USB and other things work, but laptop goes to sleep after boot.

Can You share Your latest OC folder, one that works with HS? Or You think Clover is better?

Best regards,

Goran
