

EFI für Gigabyte Aorus Gaming 7 & Threadripper 1950x X399

Beitrag von „the_ace“ vom 27. August 2023, 12:55

[fabiosun](#) [Hecatomb](#) USB stick is created, booting clean in UEFI mode to OC. Tired Catalina & Big Sur, but no success yet as you can see in the Picture. Maybe there is something wrong set in the BIOS? I will check all options again.

EDIT: Is there any Serial set in the config.plist? I guess I better check this.

EDIT #2: Okay, a serial seems to be set.
