

MacOS Ventura Blackscreen

Beitrag von „Fyynn“ vom 10. September 2023, 18:49

hi [fabiosun](#)

Aktiviere UEFI in Bios??

Ah yea that was intel. I was probably confused.

USB mapping kexts are for this Mainboard.

ncpi is out and all unnecessary kext are disabled. But still the same reaction after picking die USB Drive.

edit-

[apfel-baum](#) hat leider nichts gebracht.

lg 😊
