

MacOS Ventura Blackscreen

Beitrag von „Fyynnn“ vom 10. September 2023, 19:24

Settings fit all except UEFI, I cant find it.

I created the USB pen with the opencore (Rufus) tutorial, so i think its alright.

Oh yeah I don't know if that's important, but when I copied the Efi to the USB stick I got a message that the file "OpenCore.efi" could not be copied with all functions. But have researched on the Internet that this should not be a problem and still works.

But somehow I don't trust the whole thing. But I can't get the otherwise file on the USB stick. But I get to the boot menu of Opencore, if the file is responsible for it.
