

# MacOS Ventura Blackscreen

Beitrag von „Fyynn“ vom 11. September 2023, 15:35

yeah because of my intel Lan.

- For Intel's I225-V NICs, patches are mentioned in the desktop [Comet Lake DeviceProperties](#) section. No kext is required.
  - Requires macOS 10.15 or newer

Oh i see the link skipped me the link showed me the wrong one, I guess I have to go down to **DeviceProperties?**

I dont think so if windows doesn't count.
