

# MacOS Ventura Blackscreen

**Beitrag von „Fyynn“ vom 11. September 2023, 19:03**

Thank you MacOS is installed.

However, Bluetooth and WLAN does not work.

But I also just copied the EFI to see if it goes times lookwhat I get with my.

Can you recommend files from your EFI, useful Driver something like that? (specific for the sleep?)

I assume the config.plist from the EFI where you sent me I can take over as far and then everything should fit or?

Thank You
