And your Kext do I need it?

For example USBWakeFixup FakeSMC FeatureUnlock and AirportBrcmFixup.

Never heard this kexts before?

i would like to receive an answer 😊 (joking)

are you using my EFI?

if so, check the config

you will see kext used

and yes sorry..i like to do many tests on my rig and i have multiple kext..but it is valid only what is declared in the config... 😊 😊

i explain better

i use two different wifi a fenvi which need in Sonoma to patch many stuff

and an Intel AX210 which need multiple kext to be loaded

featureunlock is useful with Fenvi to have some features activated

you have an intel wifi so you have the need to install different kexts to have it partially working (BT / wifi , but no airdrop or continuity cam i think)

edit:

in my rig i use this kexts and all features work well (sleep/wake with mouse or keyboard one click)

now that your system boots, you have to refine your EFI

OpenCore 0.9.5 DEBUG
